

ENVIRONMENTAL POLICY

Greens are committed to the prevention of pollution and to continually improving the environmental performance of its activities and services through a process of self regulation and compliance with environmental legislation.

Specifically, Greens aims to:

- Identify and manage the environmental impacts of products, processes, packaging and services and to work with suppliers to improve overall environmental performance in these areas by operating a green purchasing policy.
- Continue to manage all aspects of waste and recycling appropriately and minimise waste sent to landfill.
- Reduce consumption of energy and resources.
- Promote sustainable paper options for our clients using our FSC and PEFC accreditations.
- Focus on an interactive programme to promote environmentally friendly behaviour in our staff and community awareness.

Having achieved ISO 14001 Environmental Policy in 2008, we intend to continue to improve our environmental performance and raising awareness of the need for improving environmental responsibilities to all our staff, suppliers and customers where appropriate.
